All pictures shown are for illustration purpose only. Actual product may vary due to machine model. The patented M1 Blueshark™ Cutting System is just easier! 1. Changing Teeth doesn't get simpler: No rights, lefts, straights or pockets and only one tool is required; making changing teeth faster and easier. Each tooth is three-position indexable. Just loosen, turn, then tighten for a sharp edge. Eliminates the guess work of ordering multiple parts, as you only need one type of tooth. 2. Faster Clean-Up: The M1 Blueshark™ Cutting System includes built in chip deflection which will help to keep chips within the width of the machine. This makes for quicker clean up and less time on the job. 3. Rock Guard Technology: Patent pending New Rock Guard Technology protects the tooth from direct impact damage in Rocky areas. 4. Phantom Wheel Technology: Patented Phantom Wheel™ Technology in the M1 Blueshark™ allows you to see through the wheel while it is spinning. See obstacles like curbs, sidewalks, and hydrants and avoid hitting them. No more guessing at how big your cut is as you swing away from you. More M1 Blueshark information and videos Page 2 The Barreto E37SGB track stump grinder is a recent addition to the Barreto tree service equipment line. Designed on the reliable track drive platform used by the Barreto 30SG commercial stump grinder, the 37SGB features a hydraulically-driven cutter wheel fitted with sixteen 900-series Green Teeth. The 37SGB tree stump grinder is powered by a 37hp EFI Briggs & Stratton Vanguard V-Twin engine. The engine is coupled to a piston pump; the larger piston pump delivers fluid to a piston motor that drives the cutter wheel. The cylinders, lift, and swing are supplied with fluid from an auxiliary pump that is mounted to the main piston pump. The tracks are driven by independent hydrostatic pumps mounted on the rear of the engine for easy access and simple linkage control. Counterbalance valves on each track drive prevent the track motors from slipping while the cutter wheel is engaged in the cutting process, even while operating on a slope. The track drive increases maneuverability around the job site, allowing the job to get done with increased efficiency. Maximum operational control is designed into the E37SGB. The cutter wheel operation and articulating arm are operated by controls mounted on the console. The cutter wheel is activated by a switch on the control stick and has a secondary safety switch to prevent accidental engagement. Back and forth movement across the job site, as well as the depth of cut, are easily controlled by handles on the console, allowing for carefully controlled movement of the cutter wheel as it reduces the stump to chips. Increase Performance and Reduce Maintenance Costs with the Barreto hydraulic stump grinder. The all-hydraulic drive to the cutter wheel eliminates costly belts. It also increases customer satisfaction by ensuring there is no loss of power because of a damaged belt or mechanical component. The track drive increases maneuverability around the job site, creating customer satisfaction by allowing them to get the job done with increased efficiency. Engine: 30SGB Briggs & Stratton Vanguard V-Twin 37hp Dimensions: Weight: 1,950 lb. Height: 49.5" Length (head to side): 79" Width: 35.5" Wheel Specifications: Cutting Wheel: 19.2" diameter to tooth Cutting Teeth: 0.750 thick, 16 green teeth Cutting Depth: 12" Cutting Height: 32" Head Swing: 134°, 99.7° arc Tracking System: Track Width: 180MM (7.1") Total Ground Contact: 472 sq. in. Cutter wheel operation and articulating arm are operated by controls mounted on console. Cutter wheel is activated by a switch on the control stick and has a secondary safety switch to prevent accidental engagement. Back and forth movement across the stump, as well as depth of cut, are easily controlled by handles on the console, allowing for carefully controlled movement of the cutter wheel as it reduces the stump to chips. All hydraulic drive to the cutter wheel eliminates costly belts. 16 Green carbide teeth. 7.1 In. wide tracks. 14 Gallon hydraulic reservoir. 290 Ft. per minute forward drive speed.
